Project Sponsor:	Girard, City of
ODOT District:	4
Funding Source:	Federal
Private Funding:	No

Project Description:

The city of Girard proposes to mill and resurface 0.75 mile (3,954 feet) of Trumbull Avenue from U.S. Route 422 to the city of Youngstown, in the city of Girard, Trumbull County. Additional improvements include partial-depth pavement repairs, curb and sidewalk replacement, installation of new guardrail, curb ramp upgrades to meet Americans with Disabilities Act (ADA) standards, catch basin adjustments, manhole cover replacements, new traffic signs and the application of center/stop/crosswalk lines and other pavement markings.

During project construction, a minimum of one (1) 10-foot lane of traffic shall be maintained on Trumbull Avenue in each direction on the existing pavement and completed pavement. Access shall be maintained to all adjacent properties, businesses, and intersecting side streets for the duration of the project. Substantial traffic disruptions are not expected with the project.

Based on the project scope of work, its Path 1 Preliminary Development Process (PDP) Classification and the proposed maintenance of traffic measures, emergency/public services contact activities were not conducted for the project. Information about this project was posted to the Girard website. See the Girard website posting documentation for the project in the Project File/Public Involvement/Project Information subsection.

The project will be constructed within the existing street right-of-way.

Existing utilities within the project study area will not be impacted/relocated to construct the project.

District environmental staff accessed the SHPO GIS database on January 31, 2019, and in accordance with Appendix A of the Section 106 PA executed November 8, 2017, the project will not impact any historic properties or historic districts.

Based on the information contained in the RMR Form prepared for the project, further environmental site assessment or special materials management is not warranted for the project. See the RMR documentation for the project in the Project File/ESA section.

Approved: 3/6/2019

Additionally, this project is considered ecologically exempt under the Ecological MOA (Agreement 19394). See the Ecological Review Form - Ecologically Exempt Project.pdf for the project in the Project File/Ecological/Reports subsection.

The project will not impact any environmentally sensitive resources within the project study area.

The environmental document and associated studies, as applicable, were approved using the Stage 2 Design plans for the project. A copy of the Stage 2 Design plans for the project is in the Project File/General/Project Information subsection as Stage 2 Design.pdf.

The estimated total project cost specified in Ellis is 1.9% greater than the total project cost specified in the Eastgate Regional Council of Governments Fiscal Year (FY) 2018 - FY 2021 Transportation Improvement Program (TIP). However, based on the estimated total project cost being less than \$2,999,999 and the additional project cost not exceeding 50% of the total project cost in the TIP, a TIP amendment is not necessary for the project.

STIP Reference # 2018stipID0235FDCO and is fiscally constrained.

Cultural Resources Coordination: Minimal Potential to Cause Effect Appendix A

Cultural Resources Coordination Date: 02/05/2019

Since no Tribe was interested in this project based on their customized preferences, no further Tribal consultation was conducted.

Supporting documentation has been uploaded to Project File: Yes

Select the appropriate project type (more than one can be selected):

(22) Projects, as defined in 23 U.S.C. 101 that would take place entirely within the existing operational right-of-way. Existing operational right-of-way refers to right-of-way that has been disturbed for an existing transportation facility or is maintained for a transportation purpose. This area includes the features associated with the physical footprint of the transportation facility (including the roadway, bridges, interchanges, culverts, drainage, fixed guideways, mitigation areas, etc.) and other areas maintained for transportation purposes such as clear zone, traffic control signage, landscaping, any rest areas with direct access to a controlled access highway, areas maintained for safety and security of a transportation facility, parking facilities with direct access to an existing transportation facility, transit power substations, transit venting structures, and transit maintenance facilities. Portions of the right-of-way that have not been disturbed or that are not maintained for transportation purposes are not in the existing operational right-of-way. **Examples include: Tower lighting within the existing operational right-of-way; Guardrail installation and replacement (including median cable barriers) where roadway ditches and backslopes will not be relocated; Improvements to existing ODOT/County maintenance facilities; Construction of new ODOT/County maintenance facilities within existing operational right-of-way; Environmental mitigation activities within existing operational right-of-way; Work on pedestrian and vehicle transfer structures and associated utilities, buildings, and terminals within existing operational right-of-way; Construction of alternative energy facilities (fuel tank farms, wind turbines, etc.)**
